

R PRESCRIPTION FOR ALLERGY MANAGEMENT

National and International Guidelines for the Management of Allergy Disease, Eczema and Asthma recommend specific management to achieve disease symptom control and medication reduction.

ECZEMA/ATOPIC DERMATITIS SKIN CARE

Allergic skin signs are red, bumpy, scaly, itchy and swollen skin. Most skin care products include chemicals that can irritate the skin. Dermatologists recommend using products free of dyes, fragrances, parabens, lanolin, and formaldehyde to treat dermatitis, hives and eczema.

SCALP/HAIR SENSITIVITY REDUCTION

Chemical irritants are found in ordinary hair products. These hair and scalp products are free of dyes, fragrances, parabens, lanolin, protein, alcohol, preservatives and formaldehyde.

DUST MITE ENCASINGS

Allergen avoidance is the most important part of relieving allergies. Do not just cover but actually encase the pillow, mattress, duvet and box spring with lab tested and proven dust mite proof encasings.

CARPET ALLERGEN REDUCTION

Carpets are the second leading source of allergens after bedding. Carpets can be cleaned with products designed to neutralize and remove dust mite and other allergens.

LAUNDRY ELIMINATION OF MITES

Current laundry methods and detergents allow house dust mites and mite particles to survive the wash and return to the bed. These laundry additives specifically kill and eliminate dust mites.

PET ALLERGY MANAGEMENT

Pets cause allergy by the protein in dander, flaky skin cells and saliva. Pets trigger irritation, asthmatic symptoms, atopic dermatitis, rash and allergic reactions. These products neutralize, reduce and remove pet allergens.

CLOTHING - ALLERGIC/SENSITIVE SKIN

Cottonique undergarments of pure organic cotton are free of latex, spandex, and all chemicals and dyes. Soothes and prevents new allergies and irritation of skin. Reduces use of steroids and medicines.

EMERGENCY EPINEPHRINE INJECTION

Allergy experts recommend two doses be available at all times for the treatment of anaphylaxis.

MOULD MANAGEMENT

Mould spores can cause asthma, allergic rhinitis, worsen allergic skin and other allergic reactions. These products remove existing mould and prevent regrowth.

AEROCHAMBERS

Improve asthma medication delivery. The medication goes directly to the lungs and it's easy to use for all patient groups.

ALLERGY VACCINES

Allergy Shots is the only intervention to actually change / cure allergies, treat and prevent asthma.
